

Battleships

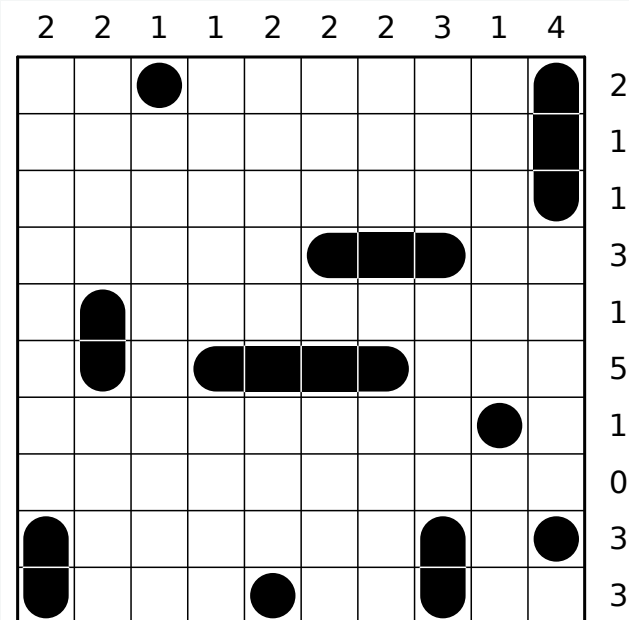

10 puzzles, easy to expert, with solutions on the last page

How to play Battleships

- A fleet of ten ships is hidden on the 10 × 10 board: one battleship (4 cells), two cruisers (3 cells), three destroyers (2 cells) and four submarines (1 cell).
- Every ship lies in a straight line, across or down.
- Ships never touch each other, not even at a corner.
- The numbers along the edge tell you how many ship cells are in each row and each column.
- The cells printed at the start are either water or part of a ship. The shape of a ship part shows whether it is an end, a middle or a submarine.

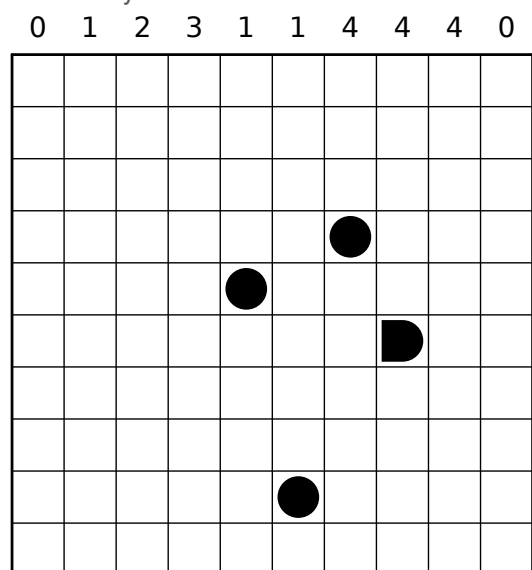

First steps

A row or column marked 0 is all water. When a row or column already has all of its ship cells, the rest of it is water. Mark water all around each finished ship, because ships never touch.
